MUREXIN Special Adhesive Inject MS-K55

- Eliminates cavities under parquet flooring
- Harmless substances, no identification required
- no post-swelling
- Ready-to-use
- Very low emission, EC1

MUREXIN. It lasts.

► Product properties

This high quality, runny, permanently elastic and void-filling MSP adhesive is free from solvents and water and is used to fix parquet elements that are sitting over cavities. For Inject MS-K55, no hazard identification is required and this adhesive is therefore an ecological and physiologically harmless alternative to PUR resins. No post-swelling or foaming, permanently elastic. Very low emission in accordance with EC1 and odourless.

► Application

This adhesive is applied to inject cavities or to bond loose elements; it is suitable for all kinds of substrates, parquets and bonding.

► Technical data

DENSITY: 1,2 g/cm³
CAN BE WORKED OVER: after approx. 6-8 hours

FINAL STRENGTH: after approx. 12 hours
COLOUR: white/beige

► Processing

RECOMMENDED TOOLS: Spray gun (can be delivered as an optional), bracket to squeeze out the roll.

Locate cavities and mark them, if necessary. Mask drill holes and then drill one or more holes (approx. 4 mm) depending on the size. Position the

nozzle and use the attached bracket to squeeze out the material. As an alternative, a cartridge applicator gun is available too. Protect the injected cavity from mechanical loads until the adhesive has completely hardened. Seal the drilling holes properly after hardening (overnight).
